**COLLEGE: GOVERNMENT COLLEGE OF  
ENGINEERING, ERODE.**

## **User Story:**

The Customer Support Ticket Priority Prediction and Automated Assignment System uses Salesforce and Agentforce to analyze customer support ticket descriptions, automatically determine priority as High, Medium, or Low, and trigger backend automation for appropriate support handling. The solution uses the Support Ticket Intelligence custom object, an Auto-Launched Flow, and an Agentforce subagent named Support Ticket Priority Analysis. High-priority tickets create an urgent handling task and are assigned to a senior support agent, reducing manual effort and improving response time.

## **1. INTRODUCTION**

### **1.1 Project Overview :**

Customer support teams receive a large number of tickets daily, while prioritization and assignment can be manual. This project provides a Salesforce-based solution that analyzes ticket information, classifies urgency, assigns the appropriate support level, and initiates automation for critical cases.

### **1.2 Purpose :**

- Automatically classify support tickets as High, Medium, or Low priority.
- Retrieve the latest support ticket associated with a customer Account.
- Reduce manual prioritization and assignment effort.

- Create an urgent handling task for High-priority tickets.
- Use Agentforce to analyze ticket details and trigger backend automation.
- Improve ticket response and resolution efficiency.

## 2. IDEATION PHASE

### 2.1 Problem Statement (Customer Problem Statement Template)

| PS   | I am<br>(Customer ) | I'm trying to                             | But                                                    | Because                                               | Which makes me feel |
|------|---------------------|-------------------------------------------|--------------------------------------------------------|-------------------------------------------------------|---------------------|
| PS-1 | Support Agent       | focus on critical tickets first           | tickets are not always prioritized automatically       | ticket prioritization can be manual                   | frustrated          |
| PS-2 | Customer            | get urgent issues resolved quickly        | critical issues may wait behind lower-priority tickets | support teams handle large ticket volumes             | concerned           |
| PS-3 | Support Manager     | assign tickets to the right support level | assignment may require manual decisions                | ticket urgency is not consistently analyzed           | overwhelmed         |
| PS-4 | Support Agent       | identify urgent issues from descriptions  | important keywords can be missed                       | ticket descriptions contain different urgency signals | uncertain           |
| PS-5 | Support Manager     | reduce SLA-related risk                   | older unresolved tickets may remain unnoticed          | SLA risk needs additional checking                    | concerned           |

## 2.2 Empathy Map Canvas

### User Persona: Support Agent

- **Think & Feel:** Wants critical issues identified quickly so urgent customer problems receive attention.
- **Hear:** Receives customer issue descriptions and support requests.
- **See:** Ticket status, issue type, description, priority level, assignment, and SLA risk.
- **Say & Do:** Reviews tickets, handles assigned cases, and focuses on urgent support issues.
- **Pain:** Manual prioritization, missed urgency signals, and delays in handling critical tickets.
- **Gain:** Automatic priority classification, clearer assignment, urgent-task creation, and reduced manual effort.

## 2.3 Brainstorming & Idea Prioritization

### Ideas Considered

- Manual ticket registers
- Spreadsheet-based ticket tracking
- Standalone support portal
- Salesforce CRM with Agentforce

### Final Selection

Salesforce CRM selected due to:

- Automation through Salesforce Flow
- AI-assisted ticket analysis through Agentforce
- Automatic priority classification
- Automatic urgent-task creation
- Reduced manual support effort

## 3. REQUIREMENT ANALYSIS PHASE

### 3.1 Customer Journey Map

Stages:

- Ticket Creation → Account Identification → Ticket Retrieval → Description Analysis → Priority Classification → Agent Assignment → Urgent Task Creation → Support Handling → Resolution

## 3.2 Solution Requirements

### Functional Requirements

| FR No | Requirement                            |
|-------|----------------------------------------|
| FR-1  | Support ticket creation and management |
| FR-2  | Account and Contact association        |
| FR-3  | Ticket description analysis            |
| FR-4  | Automatic priority classification      |
| FR-5  | High-priority task creation            |
| FR-6  | Support agent assignment               |
| FR-7  | SLA breach risk checking               |
| FR-8  | Agentforce conversational analysis     |

## Non-Functional Requirements

| NFR             | Description                                                              |
|-----------------|--------------------------------------------------------------------------|
| Usability       | Clear Agentforce interaction and understandable priority messages        |
| Reliability     | Consistent priority classification based on configured conditions        |
| Performance     | Quick retrieval and analysis of the latest support ticket                |
| Security        | Controlled Salesforce access to customer and ticket information          |
| Maintainability | Flow and Agentforce configuration can be updated                         |
| Scalability     | Supports increasing support-ticket volumes through Salesforce automation |

### 3.3 Data Flow Diagram

#### Flow:

Customer / Support Request → Account → Latest Support Ticket → Ticket Description  
→ Analyze Description → Priority Level → High/Medium/Low Decision → Agent  
Assignment → High-Priority Task (if applicable) → Final Response

**Agentforce:** User provides Account Name → Agentforce Support Ticket Priority  
Analysis → Auto-Launched Flow → Ticket Analysis → Priority and Assignment Output  
→ Response to User.

### 3.4 Technology Stack

| Layer               | Technology                                                                 |
|---------------------|----------------------------------------------------------------------------|
| Platform            | Salesforce                                                                 |
| Database            | Support_Ticket_Intelligence_c with Account, Contact, User and Task records |
| Logic               | Auto-Launched Flow                                                         |
| AI                  | Agentforce                                                                 |
| Agent Configuration | Support Ticket Priority Analysis subagent                                  |
| Automation          | Flow Decision, Assignment and Create Records                               |
| Output              | Agentforce conversation response                                           |

## 4. PROJECT DESIGN PHASE

### 4.1 Problem–Solution Fit

| Problem                        | Solution                                    | Benefit                               |
|--------------------------------|---------------------------------------------|---------------------------------------|
| Manual ticket prioritization   | Flow analyzes description and sets priority | Faster identification of urgent cases |
| Urgent issues may be missed    | High-priority keyword decision              | Critical cases receive attention      |
| Manual task creation           | Flow creates Task for High priority         | Reduced manual effort                 |
| Manual support assignment      | Flow sets assigned support level            | More consistent handling              |
| SLA risk can be overlooked     | Optional SLA Risk decision                  | Better risk awareness                 |
| Need for conversational access | Agentforce subagent                         | AI-assisted interaction               |

## 4.2 Proposed Solution

### Functional Requirements

| Parameter  | Description                                                                                               |
|------------|-----------------------------------------------------------------------------------------------------------|
| Problem    | Manual ticket prioritization and assignment causing delays in handling critical customer support issues   |
| Solution   | Salesforce-based Customer Support Ticket Priority Prediction and Automated Assignment System              |
| Innovation | Agentforce AI + Auto-Launched Flow for analyzing ticket descriptions, automatically classifying priority, |

|                |                                                                                                                                                               |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | assigning support level, and triggering urgent-task automation                                                                                                |
| Impact         | Faster identification of critical tickets, reduced manual effort, improved response time, and better support-team productivity                                |
| Business Model | Customer support operations involving customers, support agents, support managers, and AI-assisted ticket handling                                            |
| Scalability    | Supports increasing support-ticket volumes through Salesforce automation, with scope for additional assignment rules, SLA monitoring, and priority indicators |

### 4.3 Solution Architecture

Components:

Users / Support Team → Agentforce → Support Ticket Priority Analysis → Auto-Launched Flow → Account & Ticket Data → Description Analysis → Priority Decision → Task / Assignment → Final Message → Agentforce Respons

## 4.PROJECT PLANNING & SCHEDULING

### 4.4 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

#### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

| Sprint   | Functional Requirement (Epic) | User Story Number | User Story / Task                                                                                                                                                                                                      | Story Points | Priority | Team Members  |
|----------|-------------------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|----------|---------------|
| Sprint-1 | Salesforce Environment Setup  | USN-1             | As a system administrator, I want to configure and authenticate the Salesforce development environment so that I can build and manage the Customer Support Ticket Priority Prediction and Automated Assignment System. | 3            | High     | Sunilnath T   |
| Sprint-2 | Data Modeling                 | USN-2             | As an administrator, I want to create the <b>Support Ticket Intelligence</b> custom object with appropriate fields and relationships to Account,                                                                       | 5            | High     | Sivaranjani S |

|                 |                      |              |                                                                                                                                                                                |   |      |                      |
|-----------------|----------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|------|----------------------|
|                 |                      |              | Contact, and User so that customer support ticket information is stored systematically.                                                                                        |   |      |                      |
| <b>Sprint-2</b> | <b>Data Modeling</b> | <b>USN-3</b> | As a staff member, I want custom tabs and list views for Support Ticket Intelligence records so that I can easily navigate and manage customer support tickets.                | 3 | High | <b>Saraswathi D</b>  |
| <b>Sprint-3</b> | <b>Automation</b>    | <b>USN-4</b> | As an administrator, I want to create an Auto-Launched Flow that retrieves the latest support ticket for an Account so that ticket information can be processed automatically. | 5 | High | <b>Kaviyarasan G</b> |
| <b>Sprint-3</b> | <b>Automation</b>    | <b>USN-5</b> | As a support coordinator, I want the Flow to analyze ticket descriptions and determine High, Medium, or Low priority so that support                                           | 5 | High | <b>Abinеш R</b>      |

|                 |                               |              |                                                                                                                                                                                                              |   |        |                      |
|-----------------|-------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|--------|----------------------|
|                 |                               |              | tickets can be prioritized with minimal manual effort.                                                                                                                                                       |   |        |                      |
| <b>Sprint-4</b> | <b>Automated Assignment</b>   | <b>USN-6</b> | As a support coordinator, I want High-priority tickets to automatically create an urgent Task and assign them to the appropriate support level so that critical issues receive immediate attention.          | 5 | High   | <b>Sunilnath T</b>   |
| <b>Sprint-4</b> | <b>Agentforce Integration</b> | <b>USN-7</b> | As an Agentforce user, I want Agentforce to invoke the support ticket analysis Flow using the Account Name so that I can obtain ticket priority and assignment information through natural-language queries. | 5 | High   | <b>Sivaranjani S</b> |
| <b>Sprint-5</b> | <b>Validation and Testing</b> | <b>USN-8</b> | As a developer, I want to test the Support Ticket Intelligence object, Flow, Task creation, priority classification,                                                                                         | 3 | Medium | <b>Saraswathi D</b>  |

|                 |                                                           |              |                                                                                                                                                                                                                                 |   |        |                      |
|-----------------|-----------------------------------------------------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|--------|----------------------|
|                 |                                                           |              | and Agentforce action so that the complete system is verified before deployment.                                                                                                                                                |   |        |                      |
| <b>Sprint-6</b> | <b>Agentforce Configuration and Deployment Validation</b> | <b>USN-9</b> | As a developer, I want to validate the Salesforce metadata, Flow configuration, Agentforce subagent, and Flow-based Agent Action so that the complete Customer Support Ticket system is ready for demonstration and deployment. | 3 | Medium | <b>Kaviyarasan G</b> |

### Project Tracker, Velocity & Burndown Chart: (4 Marks)

| Sprint   | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed | Sprint Release Date (Actual) |
|----------|--------------------|----------|-------------------|---------------------------|------------------------|------------------------------|
| Sprint-1 | 3                  | 1 Day    | 28/09/2026        | 28/09/2026                | 3                      | 28/09/2026                   |

## 5. Project Development Phase:

### What you'll learn

1. Data Modelling
2. Fields and Relationships
3. Lightning App Builder
4. Record Triggered Flows
5. Apex and Apex Triggers
6. Batch Apex
7. Scheduled Apex

## Milestone 1: Salesforce Account

### Activity 1: Creating Developer Account

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>

2. On the sign up form, enter the following details :

**Build enterprise-quality apps fast to bring your ideas to life**

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

**Sign up for your Salesforce Developer Edition**  
A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

First Name\*  
Your first name

Last Name\*  
Your last name

Email\*  
Your email address

Role\*  
Your job role

Company\*  
Company Name

1) First name & Last name

2) Email

3) Role : Developer

4) Company : College Name

5) Country : India

6) Postal Code : pin code

7) Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in the format :

[username@organization.com](mailto:username@organization.com)

Click on sign me up after filling these.

## Activity 2: Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.

Change Your Password

Enter a new password for lead@sb.com.  
Make sure to include at least:

- ✓ 8 characters
- ✓ 1 letter
- ✓ 1 number

\* New Password  
[password field] Good

\* Confirm New Password  
[password field] Match

Security Question  
▼ In what city were you born?

\* Answer  
[answer field: asdfghjkl]

Change Password

4. Then you will redirect to your salesforce setup page.

## Milestone 2: Data Management-Objects

# Custom Object

## Object Name:

Support Ticket Intelligence

## API Name:

Support\_Ticket\_Intelligence\_\_c

# Fields

| Field Label   | API Name         | Data Type        | Description     |

# Auto-Launched Flow Logic (Modified for this Project)

## 1. Flow Type

Auto-Launched Flow (No Trigger or called from Agentforce)

## 2. Variables

### Input Variable

| Label        | API Name       | Type | Input |
|--------------|----------------|------|-------|
| Account Name | varAccountName | Text | Yes   |

## Output Variables

| Label          | API Name         | Type | Output |
|----------------|------------------|------|--------|
| Account Id     | varAccountId     | Text | Yes    |
| Ticket Id      | varTicketId      | Text | Yes    |
| Priority Level | varPriorityLevel | Text | Yes    |
| Assigned Agent | varAssignedTo    | Text | Yes    |
| Action Message | varActionMessage | Text | Yes    |

## 3. Step-by-Step Flow Implementation

### Step 1: Get Account

**Element:** Get Records

- Label: Get Account
- Object: Account
- Condition:
  - Account Name Equals {!varAccountName}
- Sort: CreatedDate DESC
- Store: Only first record

### Step 2: Assignment (Store Account Id)

**Element:** Assignment

- Label: Store Account Id

Set:

- `varAccountId = {!Get_Account.Id}`

## Step 3: Get Ticket Record

**Element:** Get Records

- Label: Get Ticket
- Object: `Support_Ticket_Intelligence__c`
- Condition:
  - `Customer__c Equals {!varAccountId}`
- Sort: `CreatedDate DESC`
- Store: Only first record

## Step 4: Assignment (Store Ticket Id)

**Element:** Assignment

- Label: Store Ticket Id

Set:

- `varTicketId = {!Get_Ticket.Id}`

## Step 5: Decision (Analyze Description)

**Element:** Decision

- Label: Analyze Description

**Outcomes:**

**High Priority**

- Description contains:
  - `"urgent"`
  - `"not working"`
  - `"failure"`

(Use multiple conditions with CONTAINS)

### Medium Priority

- Description contains:
  - "issue"
  - "slow"
  - "delay"

### Default Outcome

- Low Priority

## Step 6: Assignment (Set Priority Level)

### High Path

- `varPriorityLevel = "High"`

### Medium Path

- `varPriorityLevel = "Medium"`

### Low Path

- `varPriorityLevel = "Low"`

## Step 7: Decision (High Priority Check)

**Element:** Decision

- Label: Is High Priority

**Condition:**

- `varPriorityLevel Equals "High"`

## Step 8: Create Task (Only High Priority)

**Element:** Create Records

- Object: Task

**Set Fields:**

- Subject = "Urgent Ticket Handling"
- WhatId = {!varTicketId}
- Priority = High
- Status = Not Started

## Step 9: Assignment (Assign Agent Name)

**Element:** Assignment

- Label: Set Assigned Agent

**Set:**

- `varAssignedTo = "Senior Support Agent"`

## Step 10: Optional SLA Check

**Decision:** SLA Risk

Condition example:

- If Created Date older than 2 days

Then:

- (Optional internal flag or message)

## Step 11: Final Output Message

**Element:** Assignment

- Label: Set Final Message

**Set** `varActionMessage`:

- High:  
"High priority ticket detected. Assigned to senior agent."
- Medium:  
"Ticket marked as medium priority. Will be handled shortly."
- Low:  
"Tickets are low priority and queued for processing."

## Step 12 : Save Flow

Label Name : Support\_Ticket\_Intelligence

Active Flow

## 4. Final Flow Structure

Flow OutPut :

## 5. Final Outcome

- Takes **Account Name** as input
- Fetches latest support ticket
- Analyzes description using keywords
- Sets priority automatically
- Creates task for urgent cases
- Returns output to Agentforce

## Agentforce Configuration

Steps :

1. Go to Gear icon and Click Salesforce Go

2. Search Default and Select Agentforce Default then Enabled It

3. Select Get Started ⇒ Turn On ⇒ Confirm
4. Search Agents in Quick Find Box and Enabled The Agent then you will see Default Agent

### Name

Support Ticket Priority Analysis

### API Name

Support\_Ticket\_Priority\_Analysis

### Classification Description

This topic analyzes customer support tickets to determine priority based on issue description and urgency. It handles user requests related to ticket status, issue severity, and support prioritization.

### Scope

Your job is only to analyze support ticket descriptions, determine the priority level (High, Medium, Low), and trigger backend automation for task assignment. Do not handle unrelated requests such as billing, subscription management, or account updates.

# Instructions

Follow these steps when this topic is triggered:

1. Ask the user to provide the Account Name if not already given.
2. Retrieve the latest support ticket associated with the Account.
3. Read and analyze the ticket description.
4. Determine priority based on keywords:
  - 0 High Priority: contains "urgent", "not working", "failure"
  - 0 Medium Priority: contains "issue", "slow", "delay"
  - 0 Low Priority: if none of the above
5. Set the priority level accordingly.
6. If the ticket is High Priority:
  - 0 Trigger the Auto-Launched Flow
  - 0 Ensure a task is created for immediate handling
7. Assign the ticket to the appropriate support level (e.g., senior agent for high priority).
8. Return a clear response message to the user:
  - 0 High → Inform urgent handling is initiated
  - 0 Medium → Inform issue will be handled shortly
  - 0 Low → Inform ticket is queued
9. Do not update records directly or send emails. Use Flow for all actions.

The screenshot shows a 'Create a Topic' form with the following fields and content:

- \* Name:** Support Ticket Priority Analysis
- \* API Name:** Support\_Ticket\_Priority\_Analysis
- \* Classification Description:** This topic analyzes customer support tickets to determine priority based on issue description and urgency. It handles user requests related to ticket status, issue severity, and support prioritization.
- \* Scope:** Your job is only to analyze support ticket descriptions, determine the priority level (High, Medium, Low), and trigger backend automation for task assignment. Do not handle unrelated requests such as billing, subscription management, or account updates.
- Instructions:** The following instructions are used to run this topic.
  - \* Instruction:**
    - Follow these steps when this topic is triggered:
    - Ask the user to provide the Account Name if not already given.
    - Retrieve the latest support ticket associated with the Account.
    - Read and analyze the ticket description.
    - Determine priority based on keywords:
    - High Priority: contains "urgent", "not working", "failure"

At the bottom of the form, there is a 'Back' button, a progress indicator with a blue dot, and a 'Next' button.

## **7.FUNCTIONAL & PERFORMANCE TESTING**

During testing, screenshots were captured from Salesforce to validate vehicle creation, dealer assignment, stock validation triggers, order status updates, batch processing, scheduled reminders, and dashboard analytics. All features were verified to ensure correct functionality and performance.

## **8.ADVANTAGES & DISADVANTAGES**

### **Advantages**

- Automatic Ticket Prioritization – Classifies support tickets as High, Medium, or Low based on ticket description.
- Faster Identification of Critical Issues – Helps support agents focus on urgent tickets first.
- Reduced Manual Effort – Automates ticket analysis, priority setting, task creation, and assignment.
- Intelligent Ticket Handling – Agentforce analyzes ticket details and initiates the appropriate backend automation.
- Automatic Urgent Task Creation – High-priority tickets automatically create an Urgent Ticket Handling task.
- Improved Support Assignment – Assigns High-priority tickets to the appropriate support level, including a senior support agent.
- Conversational Support – Support users can interact with Agentforce to analyze ticket information and receive the outcome.
- Better Response Time – Automation helps reduce delays in handling critical customer issues.
- SLA Risk Awareness – The solution can check older unresolved tickets for potential SLA breach risk.
- Scalable Support Operations – Salesforce automation can support increasing volumes of support tickets.

- Improved Team Productivity – Reduces repetitive work and allows support teams to concentrate on ticket resolution.

## **Disadvantages**

- Keyword-Based Priority Logic – The documented priority classification depends on configured keywords such as urgent, not working, failure, issue, slow, and delay.
- Limited Understanding of Context – The current implementation may not capture every possible urgency signal because the documented logic is based on configured conditions.
- Dependence on Accurate Ticket Data – Correct Account, Contact, and ticket information is required for successful analysis.
- Flow Configuration Dependency – Changes to ticket handling require maintenance of the Auto-Launched Flow and its logic.
- Agentforce Configuration Dependency – Agentforce responses and actions depend on properly configured subagent instructions and Flow actions.
- Limited Scope of Agentforce – The documented Agentforce subagent is focused on ticket analysis, priority determination, and backend automation; unrelated requests such as billing or subscription management are outside its scope.
- SLA Monitoring is Limited – The current implementation includes an optional SLA-risk check rather than a comprehensive SLA monitoring and escalation solution.
- Assignment Logic May Need Expansion – Additional support teams or more sophisticated assignment rules would require further configuration.
- Maintenance Required – Priority keywords, Flow variables, Agentforce outputs, and assignment logic may need to be updated as support requirements evolve.
- Limited Analytics in Current Scope – Advanced analytics for priority trends and resolution performance are identified as future scope rather than part of the current implementation.

## **9. Conclusion:**

The Customer Support Ticket Priority Prediction and Automated Assignment System demonstrates how Salesforce Flow and Agentforce can work together to reduce manual support-ticket handling. The solution retrieves the latest ticket for an Account, analyzes its description, classifies priority, creates an urgent task for High-priority cases, assigns a support level, and returns a clear conversational response. This supports faster ticket handling, reduced manual effort, intelligent prioritization, and better team productivity.

## **10. FUTURE SCOPE**

- Add more priority indicators and business rules.
- Extend Agentforce outputs with additional ticket information.
- Add more sophisticated SLA monitoring and escalation.
- Support additional support teams or assignment rules.
- Introduce analytics for priority trends and resolution performance.
- Add more variables and configure them in the Agentforce action for richer outputs.

## **11. APPENDIX**
